

코로나19와 백신 관련 인식

Gallup International End of Year Survey 다국가 비교 조사

자국 정부의 코로나19 대응, 방역 위한 국가 간 여행 제한, 코로나19 위험성, 개인 권리 희생, 백신 접종 의향 |
자국 국민 대다수의 백신 접종 동의 여부 전망 | 본인/타인(자국민)의 코로나19 팬데믹으로 인한 백신 접종 가능성 증감

세계 조사 개요

2020년 10~12월 47개국 성인 총 44,796명 전화/온라인/면접조사(주제별 참여국 상이)

한국 조사 개요

- 조사기간: 2020년 11월 5~29일
- 표본추출: 2단계 층화 집락 무작위 추출-지점 내 성·연령별 할당
- 응답방식: 면접조사원 인터뷰
- 조사대상: 전국(제주 제외) 만 19세 이상 1,500명
- 표본오차: $\pm 2.5\%$ 포인트(95% 신뢰수준)
- 응답률: 26%(총 접촉 5,856명 중 1,500명 응답 완료)
- 의뢰처: 한국갤럽-Gallup International 자체 조사

갤럽리포트 G20210127

응답자 특성표

주요 분석 단위별 표본오차(95% 신뢰수준 기준)와 성/연령/직업/지역과 연령 분포 구성입니다. 2020년 6월 행정안전부 주민등록인구 기준 7개 권역/성/연령별 셀 가중 결과

STRICTLY EMBARGOED UNTIL 12:00 (GMT) January 22nd 2021

ALMOST A YEAR WITH THE PANDEMIC:

People around Globe Still Mobilized against the Threat, with Hope for Vaccines. Yet Potential Problems Become More Significant

Government approval for the handling of the COVID-19 pandemic is still high, but is slowly declining. Compared to last spring, the threat of the disease is also considered significant, yet now it seems a bit more exaggerated to people around the globe. Travel restrictions are widely accepted as a means of fighting the pandemic. Sacrificing of human rights too, but not without criticism. Attitudes towards vaccines are rather positive, though the shadow of doubt remains significant, even predominant in a number of countries.

These are some of the highlights of the new global research on attitudes towards the Corona-crisis, conducted by Gallup International Association at the end of 2020. The survey covers 47 countries around the world and about 45 000 adult citizens, which represents about 2/3 of the global population. During the whole of 2020 Gallup International Association followed the development of the global attitudes of the population towards the pandemic. The results, presented below, come from the fourth wave of global tracking.

Governments' measures approved in fighting the virus. Still approved.

More than a half of the world's population agrees or strongly agrees that their government is handling the Coronavirus well. Two out of every five disagree or strongly disagree. The others are hesitant in their judgement.

Three previous waves of polling revealed that approval for national governments over the COVID-19 crisis remained consistently high for the whole 2020. Yet, it now seems that at the end of the year the initial boost in national government trust has gradually been exhausted and now approval for governments' actions towards the pandemic slightly erodes. This may be due to the authorities' mistakes and flaws in crisis management or just to the fact people are getting familiar with the pandemic situation and fear no longer induces loyalty, or that they are getting tired of the restrictions.

The picture on a regional level is quite diverse - people in India (86% of the respondents agree or strongly agree that their government does OK in this situation) and Australia (82%) are the most satisfied with the way their government is handling the Coronavirus at the end of 2020.

People in Asia as a whole seem satisfied with their governments' actions towards the Coronavirus (whereby the eastern regions of the continent exhibit slightly higher levels of satisfaction) – compared to other parts of the globe. Absolute majority of the respondents in Vietnam declare to be satisfied with their Government during the pandemic. Vast majorities in Republic of Korea, Azerbaijan and Malaysia also believe their governments are handling the situation well.

Citizens in USA, Europe and Latin America, on the other hand, are now the most critical towards the way their government is handling the Coronavirus. The dissatisfaction with the government is especially high in terms of the Corona-crisis management in Ukraine, USA, UK and Bosnia and Herzegovina - over two thirds of respondents report being dissatisfied with the government.

Human rights vs. the pandemic – a growing problem

Almost three out of four of total respondents worldwide are expressing their willingness to sacrifice some of their human rights if it helps preventing the spread of the disease. One forth shares the opposite opinion.

Still there is a clear decreasing trend of willingness to sacrifice human rights. It seems that people around the world have overcome the initial shock of the new disease and are now more reluctant when it comes to letting go of some of their rights. In the first waves of global polling in the spring of 2020, willingness to give up human rights was up to 80% worldwide.

A large share of the citizens in India, Australia, Asia, the Middle East, Africa, but also western countries in the EU are willing to sacrifice some of their human rights if it will help preventing the spread of the disease. Up to 90% of people in Georgia and Vietnam state that they are ready to give up some of their rights in order to fight the virus, but the shares are also significant in Germany, Côte d'Ivoire, Armenia, Iraq, Kyrgyzstan, Austria, etc.

People in Russia, Latin America, East EU and USA are not so keen on giving up their human rights, even if it helps preventing the spread of the virus.

The largest shares of reluctance on this matter are registered in Japan, Mexico, Peru, Palestine and the eastern EU countries.

Travel restrictions are obviously already seen as the “new normal”. More than three fourths around the globe agree or strongly agree that travel restrictions between countries are acceptable in order to fight against the spreading of the Coronavirus. A fifth disagrees or strongly disagrees.

In regions such as Australia, East Asia, USA and the EU (especially the western EU countries) positive answers reach up to more than 80% of all answers (even 91% in Australia). Travel restrictions are the least acceptable for the people in the Middle East, East EU countries and Russia – up to a third of the respondents are against the consideration of travel restrictions as an acceptable measure in the fight against the disease.

Automatic approval of travel restrictions shows societal cooperativeness. However, but fear still dominates over free will and this is an alarming symptom for democracies - a year after the outbreak of the virus and months after the appearance of the first vaccines.

Is the threat exaggerated? Rather not, but the world is not as sure now as it was in April and May 2020.

More than two out of five around the world agree or strongly agree with the statement “I believe the threat from the Coronavirus is exaggerated”. Yet, the majority, disagrees. The attitude that the threat is actually exaggerated is slightly growing, compared to recent months.

Last year for instance, the global public opinion on that matter was equally spread. Later, during the so called first peak of the disease, supporters of this specific view shrunk to a third of the respondents, while those who disagreed were near two thirds. In summer, though, with the decline of the number of registered COVID-19 cases, belief in the exaggeration of the problem began to grow again. Although the numbers of the new cases of COVID-19 rose again in autumn and many countries around the world were affected by the considered second wave of the Coronavirus, **the trend for growing conviction that the crisis is exaggerated continues at the end of 2020.**

People in India seem more prone to believe that the health threat is exaggerated (more than a half of all respondents share this opinion). The share of those who neglect the danger is also significant in West Asia, Africa and non-EU Europe. Most prone to underestimate the threat are people in Kosovo, Philippines, Nigeria and Pakistan.

People in Australia, USA and EU (especially the Western EU countries) on the other hand are most likely to reject the above statement. In countries such as Finland, UK, Japan and Korea the shares of disagreement are the most significant.

Vaccines for me and my country

Vaccines against COVID-19 and vaccines in general are met with trust around the world. Yet, in some countries the reluctance towards a possible vaccination exceeds the willingness, even if the vaccines are considered safe and effective. What becomes apparent, is the need for more explaining from medical experts and public authorities in order to convince people in vaccines’ safety.

More than two thirds of the people around the globe say that they would administer a COVID-19 vaccine, if it is publicly available and is considered safe and effective. A fourth, however, are more likely to decline the opportunity to administer a vaccine. Less than 10% are hesitating on that matter.

Among regions and big nations, people in India (85%) and Asia (up to 80% in the east part of the continent and 98 in Vietnam) show the strongest willingness to be injected with the Covid-19 vaccine.

People in Russia, Europe and Africa seem more reluctant towards a vaccine against Covid-19, even if the access to the vaccines is easy and they are considered safe and effective. The highest unwillingness towards the new COVID-19 vaccination are the people of Bosnia and Herzegovina, Serbia, the Czech Republic and other European countries. Even in these countries, however, there is no clear majority against the opportunity for COVID-19 vaccination. The shares of those who consider possible vaccination and those who are rather reluctant are almost equal.

The majority of the respondents worldwide believe that most people in their country would get vaccinated if there is an accessible Coronavirus vaccine that is considered safe and effective. Another 17% think that the majority in their country will not agree to get vaccine, and 22% do not think that there will be any clear majority on this matter.

Again, people in India and East Asia as a whole (both with more than 70% shares of positive answers) are more convinced that their compatriots would get the new COVID-19 vaccine. People in Russia, EU-east and Africa, on the other hand, show a hesitant belief in their societies' willingness to get vaccinated, but with a significant share of negative answers as well (up to a fourth of all answers). In general, in those regions there is no clear majority when it comes to peoples' willingness to take a new Coronavirus vaccine.

Nevertheless, it seems that worldwide the global majority believe most of the population would rather get vaccinated in their respective country, if a new COVID-19 vaccine is available and is considered safe and effective.

It seems that the global Coronavirus pandemic has also made the majority of people around the world more likely to get vaccines in general - 50% of the respondents report having this opinion. Yet, 18% claim that after the pandemic they are less likely to get vaccinated. 28% say that there has been no change in their attitudes on vaccines.

People in India, Asia and the Middle East shape up to be more prone to vaccines in general after the start of the pandemic. In contrast, people in the EU and Europe in general, and also in USA, say most frequently that there has been no change in their view towards the vaccines.

As a whole it seems that nowhere in the world has the Coronavirus pandemic significantly produced negative attitudes towards the vaccines in general. Up to a fifth of all respondents in different regions share that now it is less likely or a lot less likely for them to get vaccinated. The biggest shares are in the Middle East and Europe (mainly in the eastern EU and non-EU countries).

Kancho Stoychev,

President of Gallup International Association:

"If the World accepts the so called "new normality" born during the ongoing Corona-crisis, the biggest victim will be the Western values system. Democracy is on stake nevertheless the yet exaggerated dramatic taste of that statement. Authoritarian regimes seem to be more effective in fighting the pandemic. Most of the Western governments /in a broader sense/ tend to follow rather Beijing then Stockholm approach in their attempts to stop the spread of the disease and wonder why they fail. Human rights meanwhile are melting like spring snow in front of the dilemma freedom or life nevertheless it might sound speculative still and nevertheless the sacrifice of generations in the epic history of the fight for individual rights for free choice, free travel and freedom of contacts. Democracy seems to evolve to a hospital, still there is a chance to avoid it?"

Methodology:

The Gallup International End of Year Survey (EoY) is an annual tradition initiated by and designed under the chairmanship of Dr. George Gallup in 1977. It is conducted every year since then. This year it was carried out in 47 countries around the world.

Regions coverage:

- EU Total - combines EU West and EU East
- EU West – Austria, Finland, Germany, Italy, Spain, UK
- EU East – Bulgaria, Czech Republic, Poland
- Non-EU Europe –Armenia, Bosnia&Herzegovina, Georgia, Kosovo, North Macedonia, Serbia, Switzerland, Ukraine
- Latin America – Argentina, Columbia, Ecuador, Mexico, Peru
- Middle East – Iraq, Jordan, Palestine
- East Asia – Hong Kong, Indonesia, Japan, Philippines, Malaysia, Republic of Korea, Thailand, Vietnam,
- West Asia – Afghanistan, Azerbaijan, Kazakhstan, Kyrgyzstan, Pakistan, Turkey
- Africa – Nigeria, Ghana, Kenya, Cote D'Ivoire
- USA, India, Australia and Russia are not included in any other regional category

Sample Size and Mode of Field Work:

A total of 44,796 persons in 47 countries were interviewed globally. In each country a representative sample of around 1000 men and women was interviewed during October-December 2020 either face to face, via telephone or online.

The margin of error for the survey is between $\pm 3-5\%$ at 95% confidence level.

About Gallup International

Gallup International Association (GIA) is the leading global independent association in market research and polling.

For over 70 years Gallup International Members have demonstrated their expert ability to conduct multi-country surveys on a comparable basis and deliver the highest quality. Our more than 100 Members and partners are leading national institutes with a profound local knowledge of research methods and techniques, statistical sources, customs and culture differences of its own country and carefully selected by the Association Board. With only one Member agency per country, Members work together on a daily basis to share knowledge, new research techniques and tools, as well as to provide the most appropriate solutions to international research projects and service our clients to the best of our abilities.

ATTITUDES TOWARD VACCINES

When considering your willingness to vaccinate yourself in general, would you say the global Coronavirus (COVID19) pandemic has made you more likely to vaccinate yourself, less likely, or has there been no change?

TOP 5 “MORE LIKELY TO VACCINATE” (A lot more likely + Somewhat more likely)

REPUBLIC OF KOREA; VIETNAM – 84%
THAILAND – 81%
AFGHANISTAN – 69%
INDONESIA; IRAQ; MALAYSIA – 67%
INDIA – 63%

TOP 5 “LESS LIKELY TO VACCINATE” (A lot less likely + Somewhat less likely)

KENYA -41%
PALESTINE – 39%
KYRGYZSTAN – 32%
PAKISTAN; COTE D'IVOIRE – 30%
PHILIPPINES; SERBIA – 29%

GIA End of Year Survey 2020, 47 countries, total sample n=44,796 respondents

When considering your willingness to vaccinate yourself in general, would you say the global Coronavirus (COVID19) pandemic has made you more likely to vaccinate yourself, less likely, or has there been no change?
