

일·급여 수준 만족 정도, AI(인공지능) 관련 인식

Gallup International End of Year Survey 다국가 조사

세계 조사 개요

2023년 10~12월 45개국 성인 총 46,138명 전화/온라인/면접조사(주제별 참여국 상이)

한국 조사 개요

- 조사기간: 2023년 11월 2일~12월 4일
- 표본추출: 층화 집락 확률 비례 추출
- 응답방식: 면접조사원 인터뷰
- 조사대상: 전국(제주 제외) 만 19세 이상 1,550명
- 표본오차: $\pm 2.5\%$ 포인트(95% 신뢰수준)
- 응답률: 29.8%(총 접촉 5,196명 중 1,550명 응답 완료)
- 의뢰처: 한국갤럽-Gallup International 자체 조사

갤럽리포트 G20241121

응답자 특성표

주요 분석 단위별 표본오차(95% 신뢰수준 기준)와 성/연령/직업/지역과 연령 분포 구성입니다. 2023년 7월 행정안전부 주민등록인구 기준 7개 권역/성/연령별 셀 가중 결과

“조사는 결코 화려하거나 스스로 빛나는
업(業)이 아니다. 사회의 명암, 좌우 대립,
빈부 문제, 정보 격차, 과거와 미래 등을
두루 살펴 매 순간 어느 한쪽으로 치우치지
않도록 스스로 경계하며 꾸준히 공부하고
탐구하는 일이다. 때로는 관행과 시류에
맞서야 하고, 때로는 비난과 질시를 묵묵히
견뎌야 한다. 어렵지만 누군가는 반드시
해야 할 일, 힘들지만 그만큼 보람된 일이다.”

STRICTLY EMBARGOED UNTIL 23:59 (GMT), May 06th 2024

**MOST PEOPLE LIKE THEIR JOBS, SATISFACTION WITH THE REMUNERATION
IS STILL LACKING BEHIND.**

Artificial intelligence is still rather a threat, but not as much for the young and educated.

Globally two thirds of the working people are happy with their jobs and about a half are satisfied with the payment they get. These are some of the results from a current poll by Gallup International Association, which also shows that on a global average level those attitudes stand rather stable over the recent years.

Artificial intelligence raises concerns, shows the poll. People worldwide are unsure about the new technology – 31% see more opportunities in AI, but 38% expect it to bring more problems to the world. A significant share of 24% worldwide does not feel informed enough to evaluate AI effects on humanity.

Rather happy with the job

Most of the working people around the world seem rather satisfied with their job (65%), and minority of 17% say that they are not. Another 17% say they are neither satisfied, nor dissatisfied. A minor share does not know how to respond.

A few years ago, in 2018, satisfied with their job were 68% around the world, 15% were not, and other 17% were neutral on this matter. It seems that recent years of uncertainty have not significantly affected peoples' perceptions.

Current attitudes show that job satisfaction is, as expected, mostly affected by one's income and education – the better educated or well-paid a person is, the more satisfaction the job brings. Other demographic characteristics like gender or age seem to have little impact on people's attitudes towards their work.

In some African counties for instance people who say they are satisfied with their job are a minority (31%), and those who are not are about a half of all respondents. In India the share (49%) of those who are satisfied with their job is also relatively low compared to the rest of the world. Most happy with their job on the other hand are people in Europe (both EU and Non-EU countries), USA, West Asia, but also Latin America, where shares of people happy with what they do reaches up to 70%.

Not so happy about the wage

Remuneration satisfaction is not necessarily related to job attitudes. One can be happy with a job, and still not satisfied with what they get from it, and vice versa. Shares of remuneration satisfaction are traditionally lower. The current wave of polling shows that almost half (47%) of working people around the world is happy with their payment, near a third (31%) is however not satisfied and 19% of the respondents are “neither/nor”.

At the end of 2018 half (49%) of world’s population were happy with their salary, 29% were not and 21% were neutral. Thus, attitudes remain stable despite the years of COVID, war outbreaks and economic uncertainty around the world.

Current results also show that male respondents are slightly happier with their remuneration than female. Younger people are also a bit happier with their wage than older generations. Age and gender however play a small role in remuneration satisfaction compared to income and education which again seem to be dominant predictor for people’s attitudes.

Worldwide societies in wealthier countries and regions show notably higher shares of personal satisfaction with wage. Huge countries like India and regions Africa again stand out with smallest shares of people happy with their payment – between 20% and 30%. Western societies (Europe – both EU and Non-EU countries), USA, and again Latin America rank highest in people’s satisfaction with wage.

AI – between threat and opportunity

When asked about their expectations of AI for the world, younger people are more optimistic and see more opportunities in its development, older generations are more worried. Most educated respondents are also a bit more optimistic than those with lower education.

Region-wise there is a prominent division between views in countries from the North/West of the world and those in South/ East. In USA, Canada, and Europe those who expect more problems to come with the new technology are reaching up to a half of all respondents, and those who see more opportunities are about 20-25%. In Russia only 19% see more opportunities in the AI. The country also stands out with the biggest share of people who admit that they do not know enough to form an opinion and another 17% who do not know how to answer at all.

In India, Africa, Asia, and the Middle East, on the other hand, concerns about AI are still present but more people are prone to expect opportunities with the development of AI.

Overall, it is evident that countries which are more economically developed are somewhat more concerned about the effects of artificial intelligence for the world. The rest of the world sees an opportunity, although fear of the new technology is still relevant.

All over the world shares of answers 'I do not feel informed enough' are significant – between 20 and 30%, which comes to show that threat or opportunity is yet to be defined.

Kancho Stoychev, president of GIA:

“While the artificial intelligence is transforming the very meaning of the word work and the experiments with the guaranteed minimum income are spreading around, still the traditional remuneration remains the key factor for the satisfaction of the working people. But the gap between the so called golden billion and the remaining other seven billion most probably will deepen with a more intense introduction of AI.”

Methodology:

The Gallup International End of Year Survey (EoY) is an annual tradition initiated by and designed under the chairmanship of Dr. George Gallup in 1977. The survey is conducted every year since then. This year it was carried out in 45 countries around the world.

Sample Size and Mode of Fieldwork:

A total of 46 138 persons were interviewed globally. In each country a representative sample of around 1000 men and women was interviewed during October-December 2023 either face to face, via telephone or online.

The margin of error for the survey is between +3-5% at 95% confidence level.

About Gallup International

Gallup International Association (GIA) is the leading global independent association in market research and polling.

For 75 years Gallup International members have demonstrated their expert ability to conduct multi-country surveys on a comparable basis and deliver the highest quality. Our more than 100 members and partners are leading national institutes with a profound local knowledge of research methods and techniques, statistical sources, customs, and culture differences of its own country and carefully selected by the Association Board. With only one member agency per country, members work together daily to share knowledge, new research techniques and tools, as well as to provide the most appropriate solutions to international research projects and service our clients to the best of our abilities.

Disclaimer: Gallup International Association or its members are not related to Gallup Inc., headquartered in Washington D.C. which is no longer a member of Gallup International Association. Gallup International Association does not accept responsibility for opinion polling other than its own. We require that our surveys be credited fully as Gallup International (not Gallup or Gallup Poll).
